

## CE Marking

### A cost effective and comprehensive service

Many products, production tools and equipment to be supplied or sold to, or in, the European market require CE Compliance. This involves assessments and testing, the resultant ability to CE Mark and Certify your product being a requirement of European legislation.

IES offer a pragmatic and cost effective approach to the process of getting a product CE Marked. We work for and with our clients, offering a comprehensive service that takes them through the process of CE compliance testing and evaluation through to self-declaration for compliance.

We are able to use our expertise in CE Marking to advise you during the product design process. What's more, we can provide planned maintenance programmes to meet current legislation, ensuring maintenance is completed at the appropriate level.

#### LVD Assessment

Our engineers are experienced in helping manufacturers achieve product compliance. Whether assessing at a customer's site or at IES' facility, we establish whether a product demonstrates any non-conformity and, where it does, can advise and support a cost effective solution.

#### EMC Testing

IES can travel to your site and complete EMC testing on equipment in situ and work with your team to implement corrective actions where necessary. Alternatively, for smaller equipment, testing can be conducted at our EMC chamber in Bristol.

#### Machinery and Risk Assessments

We can complete the necessary assessments on your machine to demonstrate conformity to the requirements of the Machinery Directive. This can include risk assessments in accordance with EN ISO 12100, Directives and Standard assessments and more.
